

Terrarium Care Tips

Follow these 5 simple tips to help your terrarium thrive

Mist with water occasionally

Start with weekly, then less frequently as your terrarium is established. Sealed terrariums require less watering.

Keep temperature and humidity consistent

Your terrarium will thrive in warm and humid conditions (on the inside). Keep it sealed, and keep temperature moderate.

Place in bright indirect light, avoid direct sun

Terrariums need light, but they can heat up quickly in full sun. Avoid window sills and areas where the sun hits directly.

Prune plants if they grow too large or fast

If you provide the right conditions, your plants will undoubtedly grow! Trim stems lightly to keep plants contained.

Wipe down the glass with a lint free cloth

Your terrarium walls will occasionally get dirty. Wipe it down with a lint free cloth for a clear view of your miniature ecosystem.
